Springfield, IL 62794-9276

Dear Mr. Hall:

**Subject: Groundwater Monitoring Update – Quarter 3, 2017 Sampling Event  
Champaign Former MGP Site, Champaign, Illinois**

On behalf of Ameren Illinois, PSC Industrial Outsourcing, LP (PSC) has completed the third quarter 2017 groundwater sampling event at the Champaign Former Manufactured Gas Plant (FMGP) Site. The Site is located at 308 N. 5<sup>th</sup> Street in Champaign, Illinois. This report discusses the analytical results of the quarterly groundwater monitoring event conducted in October 2017.

## INTRODUCTION

The third quarter groundwater monitoring event of 2017 was conducted from October 9 through 13. During the October sampling event, samples were collected from 27 groundwater monitoring wells – the seven on-site wells and 20 of the 21 off-site wells. Groundwater did not sufficiently recharge during well purging in monitoring well UMW-122 to permit collection of a groundwater sample.

The groundwater samples were delivered to Teklab, Inc. (Teklab) in Collinsville, Illinois for analysis. Samples were analyzed for the following MGP-related compounds: the volatile organic compounds benzene, toluene, ethylbenzene, and total xylenes (BTEX); polynuclear aromatic hydrocarbons (PAHs); and total cyanide (cyanide).

Groundwater level measurement data for the third quarter 2017 sampling event is provided in Table 1 of Attachment 1. Information on the table includes water depth below each well's measuring point (MP), calculated groundwater elevation, and the amount of purged water removed prior to sampling. Groundwater elevation contour maps for the shallow monitoring zone (i.e., water table) and the intermediate depth unit are provided on Figures 1 and 2 of Attachment 1, respectively. Groundwater monitoring results for constituents exceeding Illinois Environmental Protection Agency (IEPA) groundwater standards are shown on Figure 3 of Attachment 1. Groundwater data from December 2015 through October 2017 are provided in Attachment 2. The groundwater sample analytical results (Table 2) and laboratory analytical report from Teklab are provided in Attachment 3. Field duplicates were collected from shallow well UMW-107R and intermediate well UMW-302, with the duplicates identified as UMW-907 and UMW-902, respectively, on the laboratory analytical report.

## **GROUNDWATER MONITORING RESULTS**

### **Groundwater Levels**

Groundwater levels in the shallow monitoring wells at the Champaign FMGP Site in October 2017 (Table 1, Attachment 1) ranged from 5.04 to 14.01 feet below land surface (BLS). The shallowest groundwater levels occurred on-site, with water levels ranging from 5.04 to 7.11 feet BLS.

As shown on Figure 1, the shallow groundwater flows from the FMGP Site in a radial pattern towards the north, south, and west. This groundwater flow pattern, controlled principally by topographic elevation, is consistent with past groundwater-level surveys conducted prior to remediation of the Site. The shallow horizontal groundwater gradient from the Site during October 2017 ranged from 0.1 to 0.004 foot per foot (ft/ft).

Groundwater levels in the intermediate depth monitoring wells, which monitor the intermediate groundwater unit, ranged from 28.23 to 30.72 feet BLS. As shown on Figure 2, the intermediate groundwater flow direction is towards the southeast, with horizontal hydraulic gradients beneath the Site ranging from approximately 0.025 to 0.005 ft/ft.

### **Groundwater Quality Data**

Figure 3 (Attachment 1) summarizes those wells and constituents which exceeded at least one Class I or Class II groundwater standard (i.e., remediation objective) based on the October 2017 groundwater sampling event. The shallow groundwater unit is classified as Class II, and the intermediate groundwater unit is classified as Class I groundwater. Three of the 27 monitoring wells sampled in the third quarter of 2017 had at least one MGP-related constituent exceeding a Class I or II standard. Sample results for on-site shallow wells UMW-124 and UMW-125 had benzene concentrations that exceeded Class II standards. Sample results for intermediate depth well UMW-302 and its duplicate had benzene and naphthalene concentrations that exceeded Class I groundwater standards. None of the sample results for the remaining 16 shallow or eight intermediate depth monitoring wells within or surrounding the FMGP Site had concentrations of cyanide, BTEX, or PAH compounds that exceeded applicable groundwater standards in the October 2017 event.

Although cyanide was detected in some of the samples from the October 2017 groundwater sampling event, none of the detected concentrations exceeded Class I or Class II groundwater standards.

Based on the results of the October 2017 groundwater sampling event, organic constituent (BTEX or PAHs) concentrations exceeded groundwater standards at shallow wells UMW-124, UMW-125, and at intermediate well UMW-302. Shallow wells UMW-124 and UMW-125, located on-site, had respective benzene concentrations of 0.071 mg/L and 0.0432 mg/L versus a Class II groundwater standard of 0.025 mg/L. No other sample results for shallow monitoring wells located on-site or off-site exceeded Class II standards for any BTEX or PAH compounds.

Although benzo(a)anthracene was detected at off-site monitoring well UMW-118 in the October 2017 sampling event, the detected concentration did not exceed the Class II groundwater standard. In the previous groundwater sampling event in July 2017, UMW-118 had a benzo(a)anthracene concentration of 0.00077 mg/L versus a Class II groundwater standard of 0.00065 mg/L. Prior to the July 2017 sampling event, benzo(a)anthracene had not been detected at this monitoring well. Results from future groundwater sampling events will be monitored to determine if the July 2017 result was an isolated incident or an evolving trend.

The only other well with any organic constituents exceeding groundwater standards is intermediate well UMW-302. Monitoring well UMW-302 and its duplicate, UMW-902 had respective benzene concentrations of 0.348 and 0.370 mg/L, versus a Class I groundwater standard of 0.005, and respective naphthalene concentrations of 2.29 and 2.06 mg/L, compared to a Class I groundwater standard of 0.140 mg/L. This intermediate depth well, screened from 35 to 45 feet BLS and separated from the adjacent shallow well

UMW-121 by over 20 vertical feet of silty clay, was the only intermediate downgradient well monitored in the third quarter of 2017 that had organic constituents that exceeded Class I groundwater standards. Sample results for the other intermediate screened wells located downgradient of this well (UMW-305, UMW-306, and UMW-307) have not exceeded Class I groundwater standards since they were installed and monitoring began in 2008. In addition, none of the three on-site intermediate depth wells (UMW-301R, UMW-304R, and UMW-308) have had any constituent concentrations that exceeded Class I groundwater standards.

Figure 4 shows the benzene concentration in intermediate monitoring well UMW-302. Benzene concentrations increased from 0.238 mg/L in July 2017 to 0.348 mg/L in October 2017. The naphthalene concentration in UMW-302 increased from 1.94 mg/L in July 2017 to 2.29 mg/L in October 2017 (Figure 5). The highest observed benzene and naphthalene concentrations at well UMW-302 since monitoring began in May 2008 are 1.60 and 4.72 mg/L, respectively. The observed third quarter 2017 concentrations of benzene and naphthalene are at approximately 22 and 49 percent, respectively, of those maximum concentrations. Organic constituents monitored at well UMW-302 will likely continue to fluctuate in response to remedial activities conducted at the FMGP Site.

## CONCLUSIONS

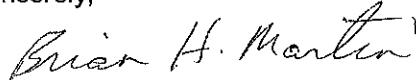

Based on the data collected in October 2017, constituent concentrations at two of the shallow monitoring wells (i.e., water-table wells) exceeded a Class II groundwater standard. Benzene concentrations exceeded Class II groundwater standards at on-site shallow monitoring wells UMW-124 and UMW-125. No other Class II groundwater standards for organic constituents (BTEX and PAHs) were exceeded. Additionally, none of the sample results at the shallow wells on-site or off-site exceeded cyanide standards in the third quarter.

Deeper groundwater quality, as represented by the 300-series wells screened in the intermediate depth groundwater unit, has had no confirmed organic constituent exceedances of the Class I groundwater standards except at well UMW-302, located south of the Site. In the third quarter of 2017, benzene and naphthalene concentrations at intermediate monitoring well UMW-302 exceeded Class I groundwater standards. No other Class I groundwater standards for cyanide or organic constituents (BTEX and PAHs) were exceeded.

The next quarterly groundwater sampling event will be conducted during January 2018.

Should you have any questions about the material presented in this summary letter, please contact us at your convenience.

Sincerely,

Brian H. Martin, CHMM, PMP  
Manager, Environmental Support & Waste Management

**RE:** Champaign FMGP Q3 2017 Groundwater

**WorkOrder:** 17100875

Dear Dan Wheaton:

TEKLAB, INC received 30 samples on 10/13/2017 2:25:00 PM for the analysis presented in the following report.

Samples are analyzed on an as received basis unless otherwise requested and documented. The sample results contained in this report relate only to the requested analytes of interest as directed on the chain of custody. NELAP accredited fields of testing are indicated by the letters NELAP under the Certification column. Unless otherwise documented within this report, Teklab Inc. analyzes samples utilizing the most current methods in compliance with 40CFR. All tests are performed in the Collinsville, IL laboratory unless otherwise noted in the Case Narrative.

All quality control criteria applicable to the test methods employed for this project have been satisfactorily met and are in accordance with NELAP except where noted. The following report shall not be reproduced, except in full, without the written approval of Teklab, Inc.

If you have any questions regarding these tests results, please feel free to call.

Sincerely,

Michael L. Austin  
Project Manager

### Abbr Definition

CCV	Continuing calibration verification is a check of a standard to determine the state of calibration of an instrument between recalibration.
DF	Dilution factor is the dilution performed during analysis only and does not take into account any dilutions made during sample preparation. The reported result is final and includes all dilutions factors.
DNI	Did not ignite
DUP	Laboratory duplicate is an aliquot of a sample taken from the same container under laboratory conditions for independent processing and analysis independently of the original aliquot.
ICV	Initial calibration verification is a check of a standard to determine the state of calibration of an instrument before sample analysis is initiated.
IDPH	IL Dept. of Public Health
LCS	Laboratory control sample, spiked with verified known amounts of analytes, is analyzed exactly like a sample to establish intra-laboratory or analyst specific precision and bias or to assess the performance of all or a portion of the measurement system. The acceptable recovery range is in the QC Package (provided upon request).
LCSD	Laboratory control sample duplicate is a replicate laboratory control sample that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MBLK	Method blank is a sample of a matrix similar to the batch of associated sample (when available) that is free from the analytes of interest and is processed simultaneously with and under the same conditions as samples through all steps of the analytical procedures, and in which no target analytes or interferences should present at concentrations that impact the analytical results for sample analyses.
MDL	Method detection limit means the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero.
MS	Matrix spike is an aliquot of matrix fortified (spiked) with known quantities of specific analytes that is subjected to the entire analytical procedures in order to determine the effect of the matrix on an approved test method's recovery system. The acceptable recovery range is listed in the QC Package (provided upon request).
MSD	Matrix spike duplicate means a replicate matrix spike that is prepared and analyzed in order to determine the precision of the approved test method. The acceptable recovery range is listed in the QC Package (provided upon request).
MW	Molecular weight
ND	Not Detected at the Reporting Limit
NELAP	NELAP Accredited
PQL	Practical quantitation limit means the lowest level that can be reliably achieved within specified limits of precision and accuracy during routine laboratory operation conditions. The acceptable recovery range is listed in the QC Package (provided upon request).
RL	The reporting limit the lowest level that the data is displayed in the final report. The reporting limit may vary according to customer request or sample dilution. The reporting limit may not be less than the MDL.
RPD	Relative percent difference is a calculated difference between two recoveries (ie. MS/MSD). The acceptable recovery limit is listed in the QC Package (provided upon request).
SPK	The spike is a known mass of target analyte added to a blank sample or sub-sample; used to determine recovery deficiency or for other quality control purposes.
Sur	Surrogates are compounds which are similar to the analytes of interest in chemical composition and behavior in the analytical process, but which are not normally found in environmental samples.
TIC	Tentatively identified compound: Analytes tentatively identified in the sample by using a library search. Only results not in the calibration standard will be reported as tentatively identified compounds. Results for tentatively identified compounds that are not present in the calibration standard, but are assigned a specific chemical name based upon the library search, are calculated using total peak areas from reconstructed ion chromatograms and a response factor of one. The nearest Internal Standard is used for the calculation. The results of any TICs must be considered estimated, and are flagged with a "T". If the estimated result is above the calibration range it is flagged "ET"
TNTC	Too numerous to count (> 200 CFU )

### Qualifiers

# - Unknown hydrocarbon	B - Analyte detected in associated Method Blank
E - Value above quantitation range	H - Holding times exceeded
I - Associated internal standard was outside method criteria	J - Analyte detected below quantitation limits
M - Manual Integration used to determine area response	ND - Not Detected at the Reporting Limit
R - RPD outside accepted recovery limits	S - Spike Recovery outside recovery limits
T - TIC(Tentatively identified compound)	X - Value exceeds Maximum Contaminant Level
